

State of Washington
Department of Natural Resources
Fire Season 2005

Calendar year 2005 was a successful one for the Department of Natural Resources' (DNR) fire protection program. DNR met its main objectives: providing for the safety of its firefighters, the public, and detecting and controlling most wildfires when small. We take this opportunity to thank all of our federal, state and local agency partners; private contractors; support personnel and, especially, our DNR dispatchers, fireline overhead, firefighters, and support personnel.

Early in the year, long-range weather models predicted for severe drought above normal temperatures and below normal rainfall for the period including June through August. In March of 2005 Governor Gregoire authorized the declaration of a Statewide Drought Emergency, as the year was setting up to become the sixth consecutive year of above normal fire danger.

In 2005, DNR's goal was to control 93 percent of the wildland fires that affect lands protected by the agency at less than ten acres in size. By doing this, fires are less dangerous; consume fewer natural resources, and pose less threat to residences and other human developments. DNR was successful. There were no serious firefighter injuries or fatalities, and DNR controlled 93.0 percent of the fires before they grew larger than ten acres in size. Forty wildfires grew larger than ten acres. Among these, eleven grew larger than 100 acres, requiring elite incident management teams and commitment of large quantities of fire suppression resources¹. These 11 fires burned 80,000 acres of federal, state and local jurisdictions at a cost to all agencies of about \$36 million.

Compared to the five-year average (2001-2005), 2005 was 22 percent below average in terms of the number of wildland fire on or threatening lands protected by the agency, but 116 percent above average in terms of the number of acres burned. DNR responded to 1,292 reports of fire, of which there were 645 classified fires that burned 30,962 acres.

Following a typical pattern, both the numbers of fires and acreage burned were markedly higher in the areas east of the crest of the Cascades Mountains as compared to areas to the west of the Cascades: there were 398 fires that burned 30,604 acres on the east side, and 247 fires that burned 350 acres on the west side.

¹ Exact counts are contained in the "Fires by Size Class Report".

DNR provided firefighting assistance to federal, state and local fire agencies under numerous cooperative agreements. Outside of Washington State, DNR personnel responded to fire calls in Oregon, Arizona, Montana and Nevada. As well, DNR personnel responded to Hurricane Katrina and Rita response efforts in the U.S. Gulf states.

Points of Interest:

- Among DNR's six upland operational Regions, Northeast Region had the highest number of fires (245), followed by Pacific Cascade Region (135), and Southeast Region (133).
- Southeast Region led the State in the largest acreage burned, mainly due to the School Fire that burned 52,000 acres. The School Fire was the largest fire in Washington State for 2005 and was started by a power line. The fire destroyed 109 homes and 106 outbuildings, and threatened 120 additional homes and 56 outbuildings

* A False Alarm is a reported fire on which initial attack dispatch action was initiated but no fire could be found, or a fire burning that is controlled.

** Other Agency is a fire burning on another agencies jurisdiction and does not pose an imminent threat to Department of Natural Resources protected lands and DNR supplies suppression resources through agreements or closest forces concept.

*** Unclassified fires are fires that have gone out naturally or under prevailing weather or fuel conditions do not threaten Department of Natural Resources protected lands.
